1. Introduction	
LATEX and should be read carefully. sample pdf file. These instructions als Manuscripts must be written in are recommended to seek the advice of	Prepare your paper in the same style as used in the so contain the necessary information for manual editing English. Authors whose native language is not English at a native English speaker, if possible, before submitting tence should be made to page numbers; if necessary, or accessive use of italics and bold face.
2. Structure of the paper	
2.1. Title page	
The title page should provide the following	lowing information:
spective tags: , \crAbstract should be clear, descr	ain institution and country should be given within r

 $^1{\rm Footnote}$ in title.

2.2. Body of the text

• The use of first persons (i.e., "I", "we", "their", possessives, etc.) should be avoided, and can preferably be expressed by the passive voice or other ways. This also applies to the Abstract.

- A research paper should be structured in terms of four parts, each of which may comprise of multiple sections:
 - * Part One is problem description/definition, and a literature review upon the state of the art.
 - * Part Two is methodological formulation and/or theoretical development (fundamentals, principle and/or approach, etc.).
 - * Part Three is prototyping, case study or experiment.
 - * Part Four is critical evaluation against related works, and the conclusion.

In any article it is unnecessary to have an arrangement statement at the beginning (or end) of every (sub-) section. Rather, a single overall arrangement statement about the whole paper can be made at the end of the Introduction section.

3. Typographical style and layout

3.1. Type area

The iosart2x.cls document class has been designed to produce the right layout from your LaTeX input. Authors are requested to strictly follow these instructions. The provided class file iosart2x must not be changed.

The text output area is automatically set within an area of particular journal layout measurements. Please do not use any LATEX or TEX commands that affect the layout or formatting of your document (i.e. commands like \textheight, \textwidth, etc.).

3.2. Font

For literal text, please use typewriter (\texttt{}) or sans serif (\textsf{}). *Italic* (\emph{}) or boldface (\textbf{}) should be used for emphasis.

3.3. General layout

For the main body of the paper use the commands of the standard LATEX "article" class. You can add packages or declare new LATEX functions if and only if there is no conflict between your packages and the iosart2x.cls.

Always give a \label where possible and use \ref for cross-referencing.

Use class option "crcready" in order to remove the page numbers from your article.

3.4. Title page

Use sentence case for the title.

Use \thanks{} command for footnotes in \title and \author commands.

Do not use capitals for author's surname. Do not add a period after the last keyword.

SATT

3.5. (Sub-)section headings

Use the standard LATEX commands for headings: \section, \subsection, \subsection, \paragraph. Headings will be automatically numbered.

3.6. Footnotes

Footnotes should only be used if absolutely essential. In most cases it is possible to incorporate the information in the text. If used, they should be kept as short as possible. The footnotes are numbered automatically. Footnotes within the text should be coded with the command \footnote{Text}.

3.7. References

References should be collected at the end of your paper (environment thebibliography). References should be listed alphabetically in the style presented in the section **References** at the end of these instructions. Use the command \cite to refer to the entries in the bibliography so that your accumulated list corresponds to the citations made in the text body.

3.8. Figures

3.8.1. General remarks on figures

The text should include references to all figures. Refer to figures in the text as Fig. 1 (or Figure 1 in the beginning of a sentence), Fig. 2, etc., **not** with the section number included, e.g. Figure 2.3, etc. Do not use the words "below" or "above" when referring to the figures.

Do not collect figures at the back of your article, but incorporate them in the text.

Position figures at the top or bottom of a page, near the paragraph in which the figure is first mentioned. Figures should not have text wrapped alongside.

Each figure should have a self-explanatory caption. Place the figure caption below the figure.

All figures coded with figure and \caption will be numbered automatically.

On maps and other figures where a scale is needed, use bar scales rather than numerical ones of the type 1:10,000.

3.8.2. Quality of illustrations

Do *not* use illustrations taken from the Internet. The resolution of images intended for viewing on a screen is not sufficient for the printed version of the journal. If you are incorporating screen captures, keep in mind that the text may not be legible after reproduction (using a screen capture tool, instead of the Print Screen option of PC's, might help to improve the quality).

Figure 1. Figure caption.

JSATT

- Line art should have a minimum resolution of 600 dpi;
- grayscales (incl photos) should have a minimum resolution of 300 dpi (no lettering), or 500 dpi (when there is lettering);

- do not save figures as JPEG, this format may lose information in the process;
- do not use figures taken from the Internet, the resolution will be too low for printing;
- do not use color in your figures if they are to be printed in black & white, as this will reduce the print quality (note that in image processing software the default is often color, so you should change the settings);
- for figures that should be printed in color, please send a CMYK encoded files.

3.8.3. Color figures

It is possible to have figures printed in color, provided the cost of their reproduction is paid for by the author. Please contact editorial@iospress.nl for a quotation if you wish to have figures printed in color.

3.9. Tables

The text should include references to all tables. Refer to tables in the text as Table 1, Table 2, etc., not with the section number included, e.g. Table 2.3, etc. Do not use the words "below" or "above" referring to the tables.

Position tables at the top or bottom of a page, near the paragraph in which the table is first mentioned. Tables should not have text wrapped alongside.

Code your tables using LATEX environments table and tabular. Each table should have a brief and self-explanatory caption that should be put above the table. Do not use the period at the end of the table caption. Double column journal: if the table does not fit into one column it may be placed across both columns using \begin{table*} so that it appears at the top of a page.

All tables coded with table and \caption will be numbered automatically.

Column headings should be brief, but sufficiently explanatory. Standard abbreviations of units of measurement should be added between parentheses. Vertical lines should not be used to separate columns. Leave some extra space between the columns instead. Any explanations essential to the understanding of the table should be given in footnotes at the bottom of the table. SI units should be used, i.e., the units based on the metre, kilogramme, second, etc.

Tables should be presented in the form shown in Table 1. Their layout should be consistent throughout.

 Table 1. Table caption

Dataset	Models	α_1	α_2	α_3	α_4	α_5	α_6
$\overline{\mathrm{CSDS}}$	Linear	0.164	0.22	0.123	0.3	0.200	0.258
	Logistic	0.189	0.155	0.157	0.201	0.154	0.144

	Logistic	0.187	0.125	0.151	0.184	0.187	0.125

SATI

3.10. Equations	
Do not put in equation numbers, since this is taken care of automatically. In numbers are always consecutive and are printed in parentheses flush with the margin of the text and level with the last line of the equation. Refer to equation as Eq. (1), Eqs (3) and (5).	ne right-hand
4. Producing of the PDF document	
The LATEX document should be compiled using a LuaLATEX compiler.	
5. Fine tuning	
5.1. Type area	
Check once more that all the text and illustrations are inside the type area and area is used to the maximum.	that the type
5.2. Capitalization	
Use sentence case in the title and the headings.	
5.3. Running headlines	
Use command to insert short title that will appear at the top a Author part will be generated automatically.	of each page.
6. Submitting the paper	
Submit the following to the journal Editorial office, online submission form or Ed (whichever is applicable for the journal):	ditor-in-Chief
(1) The main LaTeX document as well as other required files.(2) PDF version of the LaTeX file.	
(3) Please make sure you do not submit more than one version of any item.	
Acknowledgements	
Please include your acknowledgements in acks environment. For short acknowledgements ack environment.	ledgment you
Appendix A. Appendix title	
Appendices should be provided in appendix environment, before Reference	es.
A.1. First subsection	
Use the standard LATEX commands for headings in Appendix.	

F. Author et al.

A.2. Second subsection	1
Headings will be automatically numbered.	2
